**DETAILED ACTION*****Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-50, drawn to a method of optimizing high-throughput protein structure determination, classified in class 703, subclass 12. (If this group is elected, please see species election requirement further below).
- II. Claims 1-43 and 51-57, drawn to a method of optimizing high-throughput protein purification, classified in class 530, subclasses 344 and 412. (If this group is elected, please see species election requirement further below).
- III. Claims 1-43 and 58-64, drawn to a method of optimizing high-throughput protein expression, classified in class 435, subclass 69.1. (If this group is elected, please see species election requirement further below).
- IV. Claims 1-43 and 65-66, drawn to a method of optimizing high-throughput drug-target discovery, classified in class 702, subclass 19. (If this group is elected, please see species election requirement further below).

The inventions are distinct, each from the other because of the following reasons:

Groups I-IV are generic inventions that are patentably distinct due to different steps and goals. The modification steps for each of these require different methods of science and technology in order for optimization. For example, the methodologies modifying protein structure concerns technologies of 3D representations, while methodologies of purifying an isolated protein concern for example, the altering the number of PCR cycles. Thus Groups I-IV are patentably distinct inventions.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

### *Species Election*

Claims 1, 44, 51, 58, 65 and 66 are generic to a plurality of disclosed patentably distinct species of specifically disclosed biophysical and biochemical properties (see for example claims 4-28 and 31-37). As the method of claim 1 is contained in each of claims 41, 51, 54, 65 and 66, these claims have been grouped with a broadened method. The particular information, data-mining techniques, and analysis for each search would differ depending upon the biophysical or biochemical property under examination.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, even though this requirement is traversed.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
